

ProgressBar in VB6

Hi all!

Today I am going to make another simple tutorial about how to make a progress bar in VB6.

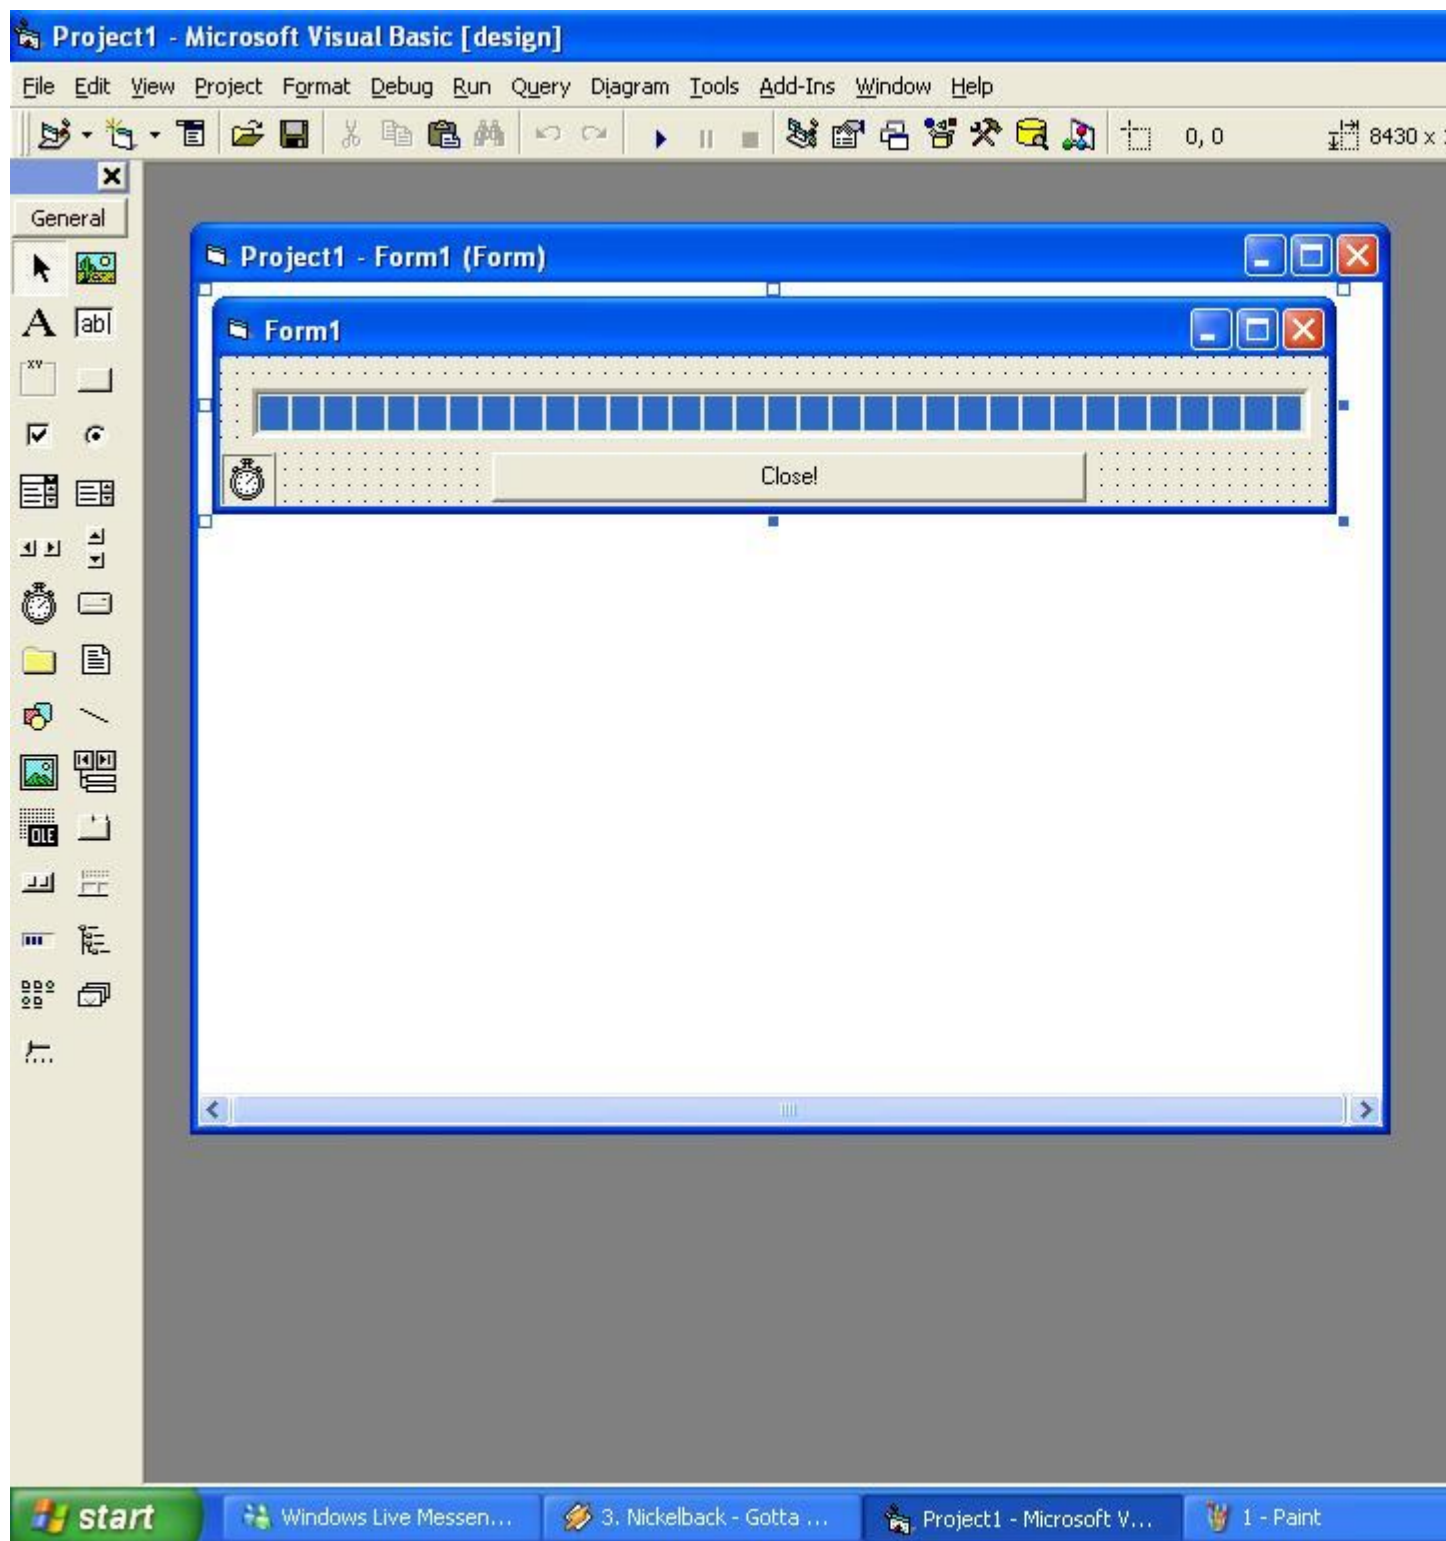

First you must include some components. Go to Project – Components – (in the list choose) Microsoft Windows Common Controls 5.0.

You will see this now:

Now double click on form1 and drag-and-drop a PrograssBar, a timer and a Button.

It will look something like this:

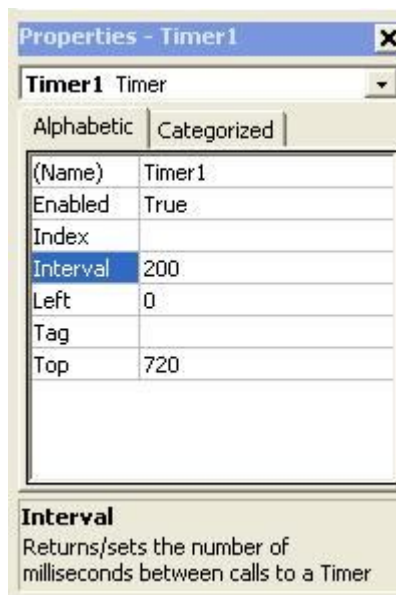

On form load (simply double click on the form and you will be ready to write the code) wrote this line on code.

Code:

```
Private Sub Form_Load()  
ProgressBar1.Value = ProgressBar1.Min  
End Sub
```

It sets the value of the ProgressBar at min.

First set the interval of the timer:

Now double click on the timer and write this:

Code:

```
Private Sub Timer1_Timer()  
ProgressBar1.Value = ProgressBar1.Value + 10  
If ProgressBar1.Value = 50 Then  
ProgressBar1.Value = ProgressBar1 + 50  
If ProgressBar1.Value >= ProgressBar1.Max Then  
Timer1.Enabled = False  
End If  
End If  
End Sub
```

You probably understand this code. I wanted to make the progressbar faster from the middle of it.

Double click on the button (its name has been changed into "close") and write:

Code:

```
Private Sub Command1_Click()  
End  
End Sub
```

It will close the program.
